

# Aiming for better ventilation and fit

## Fit

The mask comes in three sizes: S, M and L. It is designed to fit children as young as seven years old.

## Smart valve

The internal valve makes it easier for exhaled air to leave the mask while ensuring external air-borne pollutants are kept out

## Micro-ventilator

The ventilator keeps the temperature within as much as 4 deg C lower than that of a standard N95 mask. It also reduces the level of accumulated carbon dioxide from up to 5 per cent in a standard mask to 1.5 per cent.
