

STRIKE AS ONE

The Singapore Armed Forces defends against hostile air and land threats through counter-air and integrated strike operations in Exercise Forging Sabre 2015.

2 DISCOVER AND TRACK

Concurrently, the Heron-1 Unmanned Aerial Vehicles (UAVs) and Commandos discover enemy armour column and rocket launchers, and update the CP. Using their advanced sensor capability, the Heron-1 UAVs send back timely and accurate intelligence on the movement of the enemy platforms.

1 DETECT AND RESPOND

Sensors detect incoming aerial threats and ground forces. The Command Post (CP) assesses the situation and activates the F-15SG and F-16C/D fighter aircraft. After intercepting and eliminating the enemy fighters, the multi-role fighters are then tasked to destroy the enemy headquarters and air defence systems.

3 SEEK AND DESTROY

The CP orchestrates a response and activates the F-15SGs, F-16C/Ds and AH-64Ds to eliminate the ground threats using advanced munitions such as Laser Joint Direct Attack Munitions and Hellfire missiles. Through the cooperative lasing employed by the Heron-1 UAVs, fighters, attack helicopters and Commandos, the multiple enemy mobile targets were destroyed in a single pass.
