

Incidence and survival rates

It is the third most common cancer suffered by men and causes the sixth most cancer deaths in them. Between 2010 and 2014, 739 men died from the cancer. The incidence of prostate cancer has increased due to better tests, along with a rise in survival rates.

	2005-2009	2010-2014
Incidence	2,694	3,694
5-year survival rate	72.01	74.96
