

# All aboard

By 2019, 57 new trains will be added to the North-South and East-West lines, the first of which will make its debut on Sunday. In addition to a new signalling system, these trains will have the following features:

## Passenger information system

Comprising two LCD screens over each door, these displays show the upcoming stations on the line and the layout of the next station, as well as safety messages

## LED lights

These lights are brighter and more energy-saving, compared with existing fluorescent lights

## Electric-powered doors

These doors, which replace the previous pneumatic ones, have better precision and accuracy. A self-diagnostic function also makes it easier to detect problems. These doors are already in place on other lines such as the Circle Line, Downtown Line and North-East Line

## Wheelchair markings

New markings for wheelchairs are more visible. Each train will have two such spaces, located in the two middle cars
