

How it works

- The restraint system consists of two slots for insertion of the side handle of stroller, as well as a retractable seatbelt, to secure the stroller.
- The child should be seated with the stroller's seatbelts fastened.

1 Identify which slot to use

A forward-facing stroller should use the slot closer to the front of the bus.

A backward-facing stroller should use the slot closer to the rear of the bus.

2 Insert the side handle of stroller into the handle slot

3 Apply brakes of stroller

4 Use the retractable seatbelt to secure stroller to the system
