

# Keeping connected

## WI-FI SYSTEM

A whole-home Wi-Fi system forms a mesh network consisting of multiple wireless hubs to relay the Internet connection from the modem. By spacing these hubs in the home, Wi-Fi coverage can be improved.

VS

## SINGLE ROUTER

Wi-Fi reception diminishes the farther away the client devices are to the router. Objects like walls, doors and cabinets also reduce the strength of the wireless signal, leading to spotty reception.
