

Facing extinction

Some of the world's most critically endangered animals

Amur Leopard

Number left: **Around 60**

- The Amur leopard is a rare subspecies that can run at speeds of up to 60kmh.
- They are found in the Amur-Heilong in north-east China and the Russian Far East.

Mountain Gorilla

Number left: **880**

- They live high up in the mountains and have thicker fur than other great apes, to help them survive in lower temperatures.
- They are found in the Congo Basin.

Sumatran Tiger

Number left:
400 to 500

- Sumatran Tigers have black heavy stripes on their orange coat.
- Due to poaching and deforestation, they are critically endangered.
- They can be found in Borneo and Sumatra.

Sumatran Elephant

Number left:
2,400 to 2,800

- They feed on a variety of plants.
- They also contribute to the ecosystem by depositing seeds.
- They can be found in Borneo and Sumatra.
