

# How strollers damage escalators

There have been eight reported cases of escalator incidents involving strollers since the start of 2017.

- 1** Steps close up to form a flat platform in an escalator going up.

- 2** Stroller wheels wedged between steps will prevent the steps from closing up to form a flat platform.

- 3** This may result in the dislodgement of steps and cause the escalator to be stopped by safety mechanisms.
