

Effects of contact with various surfaces

Slices of bread were rubbed against various surfaces – cleaned hands, a mobile phone and a laptop – before being sealed in bags. One month later, these were the results:

SLICES OF BREAD RUBBED AGAINST CLEANED HANDS

**Anti-bacterial
hand soap**

**Hand sanitiser
containing
70% ethyl alcohol**

**Alcohol-free sanitiser
containing a
coronavirus-killing agent**

SLICES OF BREAD RUBBED AGAINST DIRTY SURFACES

Laptop

Mobile phone

The experiment shows how dirty our personal devices are, as well as the importance of personal hygiene.
