

What is TraceTogether Token and how does it work?

TraceTogether Token will be a contact tracing device that enables quick tracking of people who have been exposed to confirmed coronavirus cases. It complements the existing TraceTogether app.

1 Users carry around the TraceTogether Token with them. It will be a small device that they can slip into a bag or their pocket.

2 The token exchanges short-distance Bluetooth signals with other nearby tokens or handsets with the TraceTogether app. The interaction is logged in the devices.

3 All logs will be encrypted. Logs older than 25 days will be automatically erased.

4 If the user becomes infected with Covid-19, the device will need to be physically handed over to the authorities to extract the data needed to do contact tracing.
