

# Identity verification goes high-tech

Travellers will use facial and iris scanners in place of fingerprint ones to verify their identities

## STEP 1

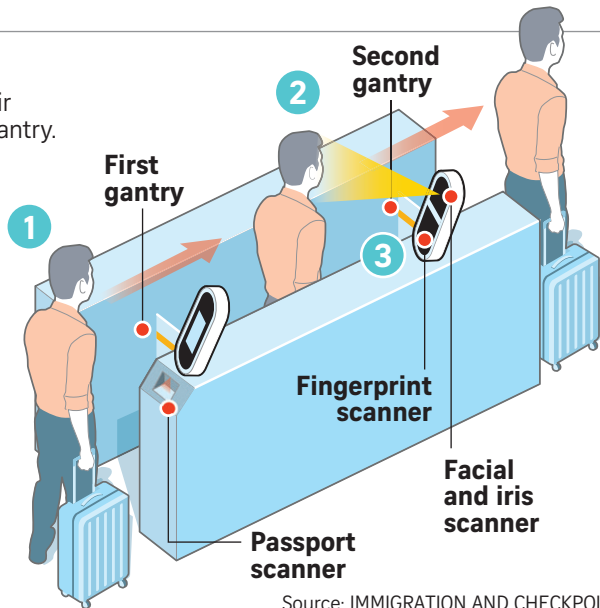

Travellers first scan their passports at the first gantry.

## STEP 2

When they arrive at the second gantry, the cameras will scan their irises and faces to verify their identities.

## STEP 3

Should this fail, they will be prompted to scan their fingerprints instead.

## TIPS

- Do not wear coloured or patterned contact lenses.

- Remove headgear that might obstruct facial or iris images, such as hats and sunglasses.

- Face masks must be removed.
