

# Interesting records

Below are some preliminary findings from the Southern Islands Biodiversity Survey

Southern Islands

## ORIENTAL MAGPIE-ROBIN

- Once common on the mainland, now considered nationally endangered
- Newly recorded on Pulau Tekukor

## ORIENTAL TURTLE DOVE

- First recorded in Singapore during a recent baseline survey of the Sisters' Islands in 2018
- A migratory bird from North-east Asia that usually spends winter in mainland South-east Asia

East Coast Park

## SEASHORE NUTMEG

- Locally critically endangered
- Newly recorded on Kusu and Sisters' Islands
- Previously recorded on St John's and Lazarus Islands

## SPOTTED WOOD OWL

- Nationally critically endangered
- Newly recorded on Sisters' Islands

## PARAMIGNYA SCANDENS VAR RIDLEYI

- Nationally critically endangered climber from the citrus family
- Previously not known to coastal areas, as it usually occurs in inland forests
- Newly recorded on Lazarus Island

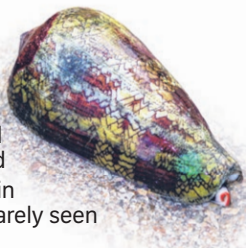

## API-API JAMBU

- Critically endangered mangrove tree species that is rare in Singapore
- Found on some islets of Southern Islands

## TEXTILE CONE SNAIL

- Nationally vulnerable
- Newly recorded on Lazarus Island
- Once common in Singapore, now rarely seen

## SMOOTH-EYED GHOST CRAB

- Nationally vulnerable
- Newly recorded on Lazarus Island
- Distribution in Singapore not well understood due to rare sightings
- Previously recorded at East Coast Park and on Sentosa
